

REBASE STAKD - TOKEN METRICS

7.5% (75,000) of rSTAKD will be available for the token sale. 2.5% (25,000) of rSTAKD will be airdropped to top 25 LP providers (including farmers), top 25 stakers and top 25 holders. Every wallet can receive only one airdrop. A small portion of the airdrop will be available for people completing the designated tasks and filling out the form.

AIRDROP - 25,000
SALE - 75,000
STAKING - 900,000

FARMING AND STAKING

There will be a 1 farming pool for rSTAKD/BNB Liquidity providers (450,000 rSTAKD). For staking there will be 3 pools with a 4% deposit fee which will result in a burn of STAKD. bUSD, STAKD and BNB staking pools with 150,000 rSTAKD available in each.

rSTAKD/BNB - 450,000

bUSD - 150,000

STAKD - 150,000

BNB - 150,000

TOKEN SALE

1 BNB - 150 rSTAKD

500 BNB RAISE

Date: 8th March 2021

STAKD Rebase Mechanism - rSTAKD

rSTAKD is based on the concept of creating an elastic supply token. With AMPL being the first mover and the market and also biggest elastic currency out there, the rSTAKD aims to be even better and fairer to the community.

What rSTAKD will take from other elastic currencies is a rebase model. The unique proposition is a two way rebase which is soft pegged to the PancakeSwap Total Value locked and 24-hour volume of crypto market cap. We are adding an extra factor to the rebase which is now tied to two different variables. Price of the token will thus play no value in the rebase process. To prevent death rebase spiral we will implement the following failsafe: In case three negative rebases happen the 4th rebase will always be a positive 4% rebase.

*An elastic supply (or rebase) token works in a way that the circulating supply expands or contracts due to changes in token price. This increase or decrease in supply works with a mechanism called rebasing. When a rebase occurs, the supply of the token is increased or decreased algorithmically, based on the current price of each token. - **Binance Academy***
